

# RENAISSANCE RUMFORD™ 1500

CLEAN DOESN'T MEAN COMPROMISE

# RENAISSANCE RUMFORD™ 1500

The Renaissance 1500's firebox opening is almost a 50% larger than the Rumford 1000. This new addition to the Renaissance family is not just a supersized version of the original. While it utilizes much of the advanced technology of the original as a building block; it is essentially a completely different fireplace from the ground up.

The Renaissance is all about beautiful fire and ultra low emissions and we haven't had to sacrifice performance for size! Despite having nearly a 50% larger door opening, the Renaissance Rumford 1500 burns almost as cleanly as its originator. With emissions no greater than **3.4 g/kg\***, the 1500 burns cleanly enough to far exceed the requirements of ASTM 2551 phase II (5.1 g/kg). With its massive door closed, the emissions drop even further to under **1 g/kg\*** emissions.

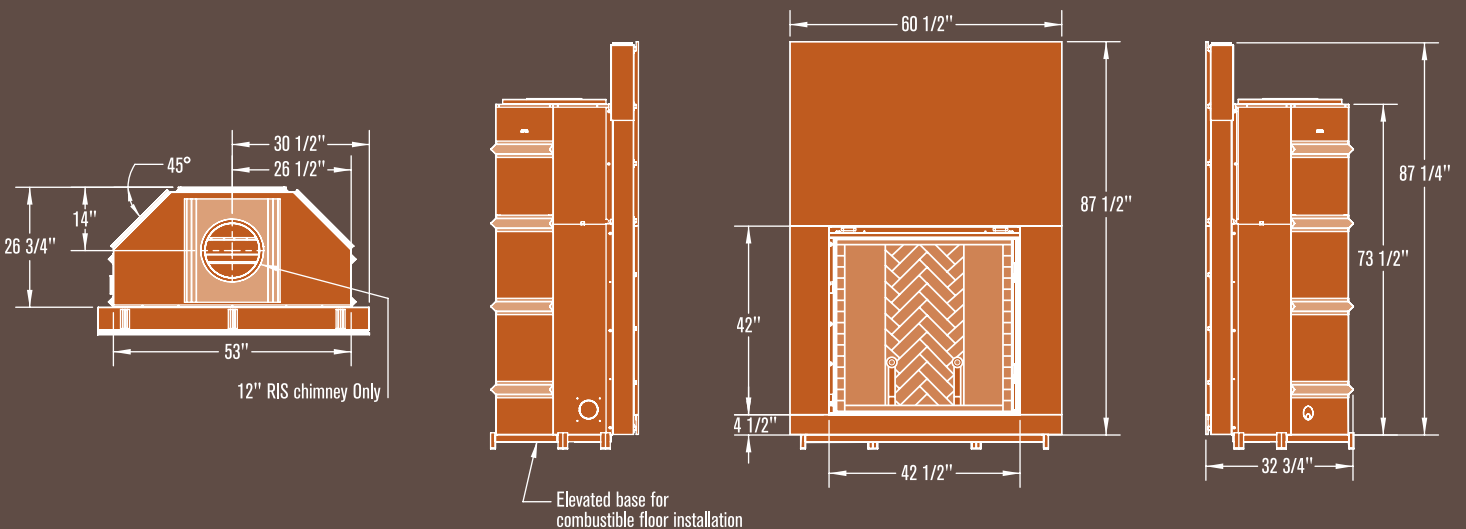

The Renaissance 1500's door weighs 50% more than the original which presented us with a considerable engineering challenge, especially considering our commitment to have

the entire system serviceable in the field after installation. To accommodate the extra weight we switched from door rails to a heavy duty caster system that is much smoother and makes the door of the 1500 even easier to open and close than 1000's. It is a significant upgrade over the original.

The **Flush Hearth System** is a new feature of the 1500 as well. The base of the Rumford 1500 is removable; which not only reduces the height and weight to make installation easier, but it allows the firebox to be installed flush with the floor as long as it's placed on a non-combustible floor. This gives the 1500 an unprecedentedly realistic masonry fireplace look.

With 1500 square inches of viewing space, a fire that's just as beautiful as the original Rumford 1000, emissions so low it's almost unbelievable and the most advanced door system in the industry, our motto "Clean doesn't mean compromise" has just been taken to a whole new level.

\*These are preliminary test results from Myren Consulting. The final results will be available by July 1<sup>st</sup>.

\*These dimensions were current during fireplace testing. Final dimensions may vary slightly.
